Which fixed report minimizes a stipulated loss?

64 fixed reports in eight matched cells; full and existing H+1 sparse-grid summaries.
J(alpha) = alpha x mean positive overrun + (1-alpha) x mean unused allowance

Dashed line: original alpha=.95 (19:1). Unlabeled thin segments and all boundary ties are retained in results.json.
Fixed .95 reports are not refitted for other preferences. Alpha=0/1 are limiting single-component objectives.
Inspected-sample descriptive sensitivity; no observed financing costs, independent grid or deployment selector.
