Potential reviewers: author confirmation required

No candidate has been contacted. Institutional identity and subject expertise were checked against official pages. Availability, conflicts, institutional email and journal eligibility require the author's confirmation. Author names and affiliations: [TO BE COMPLETED BY AUTHOR].

Tilmann Gneiting

Group Leader, Computational Statistics, Heidelberg Institute for Theoretical Studies; Professor of Computational Statistics, Institute of Statistics, Karlsruhe Institute of Technology

Forecasting and statistical evaluation. Potential match for consistent quantile scores, forecast comparisons, and the distinction among mean score, breach frequency and illustrative cost preferences in Sections 5, 7.5 and 8.

HITS profile

Email: [author to verify]. **Conflicts:** Pending author confirmation.

Raffaella Giacomini

Professor of Economics, Department of Economics, University College London

Econometrics, conditional predictive ability and forecast comparison. Potential match for validation samples, paired comparisons and the retrospective scope of the validation-length and historical default procedures in Sections 6, 7.4 and 9.1.

UCL staff directory; UCL official biography; UCL research publications

Email: [author to verify]. **Conflicts:** Pending author confirmation.

Roger Koenker

Honorary Professor, Department of Economics, University College London; Professor Emeritus, Department of Economics, University of Illinois Urbana-Champaign

Quantile regression. Potential match for penalized quantile fitting, the intercept-only limit, empirical-rank conventions and the rejected high-quantile numerical repair in Sections 5 and 7.4 and Supplement S11. Honorary and emeritus status must be retained when entering the nomination.

UCL honorary directory; Illinois profile; Cambridge University Press book page

Email: [author to verify]. **Conflicts:** Pending author confirmation.

Fabian Krüger

Professor of Economics, Applied Econometrics, Karlsruhe Institute of Technology

Probabilistic forecasting and forecast evaluation. Potential match for preference-sensitive rankings, fair comparison with historical controls and the limits of score-based conclusions in Section 8 and Supplement S9.

KIT professor directory; KIT profile; KIT research page

Email: [author to verify]. **Conflicts:** Pending author confirmation.

Robert F. Engle

Professor Emeritus of Finance, New York University Stern School of Business; Co-Director, Volatility and Risk Institute

Time series analysis, financial risk and CAViaR. Potential match for dynamic quantile benchmarks, delayed calibration and the limits of translating forecasts on fixed observed paths into practical risk policies in Sections 5, 7.5 and 10.

NYU Stern role; NYU official biography

Email: [author to verify]. **Conflicts:** Pending author confirmation.

Giacomini and Koenker share UCL affiliations; Gneiting and Krueger share KIT affiliations and have coauthored work. The author should consider institutional breadth and all relevant relationships before selecting any subset.
